

Transformer Models – Quiz Questions

◆ Basic Level

1. What is a Transformer model in AI?

- A. A database system
- B. A neural network architecture for sequence modeling
- C. A cloud service
- D. A programming language

 **Answer:** B

2. Who introduced the Transformer architecture?

- A. Google
- B. Microsoft
- C. OpenAI
- D. Facebook

 **Answer:** A (in the paper “*Attention Is All You Need*”)

3. What is the key mechanism used in Transformers?

- A. Convolution
- B. Recursion
- C. Attention
- D. Clustering

 **Answer:** C

4. What does NLP stand for?

- A. Neural Learning Process
- B. Natural Language Processing
- C. Network Logic Programming
- D. None

 **Answer:** B

◆ Intermediate Level

5. What is “Self-Attention”?

👉 Mechanism where a model focuses on different words in a sentence to understand context.

6. What is the full form of BERT?

👉 Bidirectional Encoder Representations from Transformers

7. What is the full form of GPT?

👉 Generative Pre-trained Transformer

8. Which component generates output in GPT?

- A. Encoder
- B. Decoder
- C. Both
- D. None

👉 Answer: B

9. Transformers process data in which way?

- A. Sequential
- B. Parallel
- C. Random
- D. Manual

👉 Answer: B

◆ Advanced Level

10. What problem do Transformers solve compared to RNNs?

👉 Long-range dependency and slow training issues

11. What is “Positional Encoding”?

👉 Technique to give order information to input tokens

12. What is Multi-Head Attention?

👉 Multiple attention mechanisms running in parallel to capture different relationships

13. Which model uses only Encoder?

👉 BERT

14. Which model uses Decoder-only architecture?

👉 GPT

15. What are LLMs?

👉 Large Language Models trained on massive datasets

◆ Scenario-Based Question

16. Why are Transformers preferred in modern AI systems?

👉 Because they:

- Handle long context
 - Train faster (parallel processing)
 - Deliver better accuracy
-

📝 Bonus Rapid-Fire

- Transformer paper → *Attention Is All You Need*
- Core idea → Attention mechanism
- BERT → Understanding text
- GPT → Generating text
